

METABOLIC LDL

BY SYNERGY WORLDWIDE

After creating Metabolic LDL's innovative and potent formula for supporting the cardiovascular system, scientists conducted an independently-reviewed clinical study to prove its effectiveness. The results of this study are astounding.

A PATTERN OF PRODUCT DEVELOPMENT

METABOLIC LDL was developed to support healthy cholesterol levels and cardiovascular function. After studying the circulatory system in-depth, Synergy scientists began analyzing plants that were known for positively influencing cholesterol production and moderating oxidation. They were able to see, on a molecular level, that the Bergamot Orange had the power to support cholesterol levels already in the normal range. Bergamot Oranges are bursting with polyphenols, which are naturally occurring antioxidants that scavenge free radicals from the body.

Once Synergy Scientists had analyzed and tested the Bergamot Orange, they began focusing on what other antioxidant phytonutrients would help to enhance Bergamot's benefits. By combining the Bergamot Extract with a proprietary blend of high-ORAC antioxidants, Metabolic LDL's unique and powerful herbal formula naturally supports healthy cholesterol levels and oxidation, triglyceride levels, and blood sugar levels already in the normal range.

IMPORTANT TERMS TO KNOW

LDL Cholesterol - Low-density lipoprotein cholesterol. May also be referred to as, "bad cholesterol" because it travels to your arteries where it may begin to accumulate on your arterial walls.

HDL Cholesterol - High-density lipoprotein cholesterol. May also be referred to as, "good cholesterol" because it scavenges harmful cholesterol from the body.

Oxidized Cholesterol - Cholesterol that builds up in your arteries.

HbA1c - The amount of glucose attached to hemoglobin, a red blood cell protein that carries oxygen throughout your body.

Triglycerides - The fat in your blood. High triglyceride levels increase your chances of developing heart disease.

PAI-1 - Supports normal blood clotting. High levels of PAI-1 can increase blood clot formation.

Apolipoprotein B - The primary protein in LDL cholesterol. High levels of apolipoprotein B indicate high cholesterol.

THE POWER OF THE SUPPLEMENT

The trial was conducted on subjects with abnormally elevated cholesterol or fat levels in the blood (dyslipidemia). Subjects were instructed to take two capsules of Metabolic LDL in the evening. After 12 weeks of daily intake of Metabolic LDL, all subjects experienced statistically significant changes:

In addition, Metabolic LDL was particularly effective for individuals with higher HbA1c levels (above 5.4%). These individuals experienced the following additional significant changes:

ONLY THE BEST INGREDIENTS

Bergamot Fruit Extract (Citrus bergamia Risso):

Technically an orange, this fruit more closely resembles a lime or lemon with a bumpy outer peel that ranges from pale green to yellow.

We source our Bergamot Extract from the southern coast of Italy, where the fruit is able to fully develop its active ingredients. Only the organically-grown, hand-harvested Bergamot Oranges in this area are known to have the high levels of polyphenols necessary to provide cardiovascular benefits.

Proprietary Antioxidant Blend: Nine fruit and plant extracts—including apple, turmeric, green tea, grape seed, mangosteen, grape skin, olive leaf, blueberry, and capsicum—are featured in this dynamic formula.
